Person-oriented systems & person features

**Person-oriented: evidence:**
- degrees of distance from the hearer;
- hearer’s role in distance-oriented dems;
- interactions & inconsistencies.

**Person features:** superior to locative features (Lander & Haegeman 2018) for two main empirical reasons:
- derivation of four-way deictic oppositions
e.g. Paamese (Crowley 1982: 62);
- extra indexical information encoded: Siwi Berber (Souag 2014):

Person system (Harbour 2016):
- person features: [±Author], [±Participant]
- perform operations on (i.e. partition) \( \pi = \{ i, u, u, o \} \)
Acknowledgements
Many thanks to Roberta D'Alessandro, Ora Matushansky, and Joost Zwarts for discussing aspects of this work with me.

This project has received funding from the European Research Council (ERC) under the European Union’s Horizon 2020 research and innovation programme (grant agreement: CoG 681959_MicroContact).
